58 Years In Bird Control

# BIRD CONTROL ///

was essential to the project. After an onsite evaluation, Nixalite suggested K-Net HT netting as the best possible solution. K-Net, offered exclusively by Nixalite, features ¾-inch square mesh and is made of 12-ply high-density polyethylene. The netting has a 75-pound knotted breaking strength, offering maximum durability. Nixalite and the Tricon Construction Group then needed to design a system that would make the lighting and windows accessible for cleaning and maintenance. A cable rail system was designed that allowed for easy removal to clean the windows and tend to other maintenance operations, which was approved by the architects.

The project called for the installation of more than 25,000 square feet of netting and 4,000 feet of netting cable. "The system has been removed once and it was re-attached. It looks and works as well as it did the first time," said Mark Horcher, a project manager with Tricon. Aesthetically, the system is virtually undetectable if one is not looking for it. "We've had nothing but compliments on it and there has been no penetration from the birds," he said.

Bird Problem: **Perseverance Pays Off for Washington PMP**

As homeowners discover they don't have to live with pest birds, calls to PCOs demanding solutions are becoming more common.

Natural Forces offers various bird control options that go beyond traditional products while allowing plenty of flexibility for unique situations. Craig Pearsall, Senske Pest Control, Spokane Wash., had worked diligently to eradicate a homeowner's sparrow problem for several years. Sparrows were nesting in carport rafters and roosting on railings and windows, causing quite a mess.

Pearsall recently had tried repelling the birds using noise-makers with mixed results. While the sparrows were initially frightened by the sound, they soon grew accustomed to the racket.

He decided to try a combination of exclusion netting and Fog Force TR to address the problem. The netting prohibited sparrows from entering protected sections while Fog Force TR was used in more visible areas to repel birds from roosting on porch railings and window sills. "The Fog Force fragrance repels the sparrows without spreading into areas inside the house. Even TR's installed directly outside bedroom areas created no problems," Pearsall said. The timed release of Fog Force encouraged the sparrows to find roosting sites elsewhere. The results pleased a challenging customer with no need for extra service calls. "Excellent results, really good overall. I'll continue to use Fog Force as an integral part of our bird and pest control business," Pearsall said.

**SUPPLIER: PiGNX**

Bird Problem: **Bird Repellent is Easy to Use, Clean Up**

PiGNX is the most unique bird repellent ever invented, the manufacturer states, and the product's benefits fall into four areas: economic, environmental, effectiveness and ease of use. PiGNX is cost-effective and profitable, allowing PMPs to develop guaranteed bird programs for their clients that add both profits and ongoing revenue, as well as providing them with a major competitive advantage over other higher-priced bird control options, the company says.

# PiGNX®

PiGNX is safe for both the target pest, applicator and for the environment and it is made from Food-Grade ingredients, the manufacturer reports. In addition, the product is EPA- and NSF-approved and can be used inside food-manufacturing facilities. PiGNX is 100 percent effective when used according to the manufacturer's recommendations, the company says.

PiGNX is classified as a non-melting gel that will not melt, freeze or drip. It is easy to apply, requires little training and can be cleaned up with soap and water. PiGNX will add sustainable revenues to PMPs currently offering bird control services and a new revenue stream for those just breaking into the bird control market. **PCT**
